- 40.
- ☐ A) exciting
 - ☐ B) weak
 - ☐ C) tired
 - ☐ D) energized

Direction for questions 41-50. Read the passages below and choose a, b, c, and d in your answer sheet.

1 Dramatic changes in children's language occur during early childhood. At about 18 months, children may know about 30 words and can speak one word, such as "Doggie!" or "More!" at a time. This ability shows that children have learned to use words as symbols that stand for objects, actions, and people. Then suddenly within just a month or so, children's vocabularies double to about 70 words, and they begin to put words together to form two-word sentences such as "There doggy" or "Mummy come". When early childhood ends at six years, children know from 8,000 to 14,000 words and speak in long, accurate sentences.

2 Children's first words and sentences are about the visible, here-and-now world. By the age of four, children begin to talk about things that they cannot see as well as those they can and about the past and the future. They also invent stories about things that never happened.

3 As children grow older, they become better able to express complex ideas and judge what they need to say in order to make themselves understood. Children also become more skillful at adjusting their speech to different people. They learn to talk formally and respectfully to adults, and informally to their friends. They speak "baby talk" to infants. Children begin to enjoy playing with language itself. They take pleasure in riddles and word jokes, and they may write poems and stories.

41. Which of the following can a child who is about 20 months old say?

- ☐ A) Hey, I'm here
- ☐ B) Mummy come
- ☐ C) This is my doggy
- ☐ D) Please, milk, I'm hungry

Direction for questions 41-50. Read the passages below and chose a, b, c, and d in your answer sheet.

45. It is understood from the passage that the first words children express, are -----.

- ☐ A) the first thing they see
- ☐ B) of their immediate needs
- ☐ C) what they like to see
- ☐ D) symbols for them

1 People in the Caucasus Mountains are famous for their longevity. Official birth records were not available, but the community says a woman called Tsurba lived until age 160. Similarly, a man called Shirali probably lived until 168; moreover, his widow was 120 years old. In general, the people not only live a long time, but they also live well. Furthermore, when they die, they not only have their own teeth but also a full head of hair, and good eyesight too. Vilcabamba, is another area famous for the longevity of its inhabitants. This mountain region is also at a very high **altitude**, far away from cities. There too, there is very little serious disease. One reason for the good health of the people might be the clean, beautiful environment; another advantage is the moderate climate. The temperature is about 70 Fahrenheit all year long; furthermore, the wind always comes from the same direction. In addition, the water comes from mountain streams and is high in minerals. Perhaps as a result of this valuable resource, the region is rich in flowers, fruits, vegetables, and wildlife.

2 In some ways, the diets of the inhabitants in the regions are quite different. Hunzukuts eat mainly raw vegetables, fruit, and chapatis; they eat meat only a few times a year. In contrast, the Caucasian diet consists mainly of milk, cheese, vegetables, fruit, and meat. In Vilcabamba, people eat only a small amount of meat each week; their diet consists mostly of grain, corn, beans, potatoes, and fruit. Even so, experts found one surprising fact in the mountains of Ecuador: most people there, even the very old, consume a lot of coffee, drink large amounts of alcohol, and smoke 40 to 60 cigarettes daily!

46. According to the second paragraph -----.

- ☐ A) diet plays no role in longevity
- ☐ B) diet plays a greater role in longevity than environment
- ☐ C) smoking cigarettes cannot be harmful
- ☐ D) diets can be different but affect longevity
